INTRODUCTION

The Gripnail 7105RF power pinner glider was designed to require minimum maintenance. The 7105RF is PLC controlled, which simplifies trouble shooting. All hose connections between valves and cylinders use push-fit type fittings. These fittings save maintenance time if lubrication or replacement is required on any item.

OPERATOR SAFETY

Proper safety precautions must be observed with any piece of equipment. This section contains several guidelines designed to ensure operator safety. Follow these directions at all times.

REMEMBER—SAFETY FIRST!

FIVE SAFETY RULES

1. DO NOT OPERATE this machine without all covers and guards in place.

2. DISCONNECT all electrical power and compressed air sources before servicing. Follow OSHA standard 1910.147 “CONTROL of HAZARDOUS ENERGY (LOCKOUT/TAGOUT)”

3. TROUBLESHOOTING should be done by qualified personnel only.

4. THE OPERATOR should always wear the personal protective equipment as outlined by his/her employer, such as eye and ear protection, to avoid injury.

5. MAINTAIN the equipment in good operating condition.
SYSTEM REQUIREMENTS

ELECTRICAL: 190, 208, 230 VAC/60 HZ/1Ø
31.0, 28.4, 25.5 AMPS
(Recommend using a 50 Amp, slow blow Disconnect)

PNEUMATIC: 40-55 PSI @ 1 CFM

INSTALLATION INSTRUCTIONS

1. Place machine on a hard, flat, level surface. If the surface is irregular and shimming is required, use steel (sheet metal) to make shims. Normal vibratory parts feeder operation requires the machine to be stable and solidly supported. DO NOT USE cardboard, ply-wood, particle board, other composite wood products or soft materials as shim stock.

2. Place bowl feeder on machine into spaces provided, noting location of bowl exit. Plug the bowl feeder into the socket near the bowl support.

3. Ensure a 1/8 inch clearance gap exists between the feeder bowl exit and the entrance to the track assembly.

4. Connect air. Safety Note: Quick disconnect air fittings are recommended. ALWAYS install the free flowing MALE connector onto the machine. This will permit immediate exhausting of air from the machine when disconnected from the shop supply.

5. Connect electricity to the disconnect switch located inside the Electrical Enclosure. (See Figure 1) Measure the voltage at the customer supplied fused disconnect. Set the jumper on the terminal strip (190, 208 or 230) to match the incoming voltage. This machine is a welder and is supplied with 35 amp dual-element, time delay (200kA inrush) main fuses. Select the size and style plug, receptacle and branch circuit protection accordingly.

Figure 1
MAINTENANCE

1. DRAIN water from filter/regulator assembly DAILY.

2. REMOVE accumulated fiberglass and adhesive buildup from the magnetic driver and track daily or as required.

3. Check for loose hardware and tighten as required.

PLC INPUTS & OUTPUTS

INPUT 4-D (C ON)
WELD SETTING 1–4
INPUT 2 (ON)
LOAD SENSOR
INPUT 1
TRIGGER

INPUT E (ON)
RAPID FIRE

OUTPUT 1
LOAD VALVE
OUTPUT 2
DRIVE VALVE
OUTPUT 3
WELD RELAY

SEQUENCE OF OPERATION

1. Input 2 (Load Sensor) AND Input 3 OR 4 OR B OR C OR D MUST be on.
2. Input 1 (Foot or Trigger) is activated momentarily or continuously held.
3. Output 2 (Drive) turns on.
4. Output 3 (Weld Relay) turns on and stays on based on the time setting from Input 4-D.
5. Output 3 (Weld Relay) turns off.
6. Output 2 (Drive) turns off.
7. Output 1 (Load) turns on.
8. Input 2 (Load Sensor) turns off.
9. Output 1 (Load) turns off.
10. Input 2 (Load Sensor) turns on.
11. Input 1 (Foot or Trigger) must be off after Step 9 to restart the sequence (if RAPID FIRE off).
TROUBLESHOOTING

A. Drive head doesn’t operate after foot pedal or triggers are depressed.

1. Check incoming power connection and ON switch. Page 5 & 12.

2. Is air connection and/or shop supply valve open?

   a. If not ON, check the sensor position.
   b. If not ON, check 24 Volt DC power supply in control box. Page 11.

4. Check drive valve fuse #3.

5. Is the foot pedal/trigger input light (I1) and drive valve output light (O2) ON when the foot pedal/trigger is depressed. Page 11.

B. New weld pins do not load onto drive head.

1. Check the drive cylinder and magnetic driver. If either is discovered loose, readjust and tighten. See page 8.

2. Check load valve fuse #4.

3. Turn OFF all power and air, then manually check load cylinder for binding.

C. Vibratory feeder bowl doesn’t operate.

1. Check the power cord connection.

2. Check the position of the speed control setting.

3. Check the sensor on track.

4. Check the feeder bowl control fuse (3 amp). Page 11

D. Improper weld.

2. Clean upper and lower weld tips.

3. Check the weld transformer is set on the correct taps to match incoming voltage.
WELD SETTING ADJUSTMENTS

1. With the power “ON”, set the WELD SETTING switch to correspond to the pin being fastened. (Note: These setting are reference starting points only.)

<td>4</td>
</tr>
</tbody>
</table>

2. Place the sheet metal flat on the lower weld tip or anvil and press the foot pedal.

3. Make several test welds to insure uniform and proper weld.

SERVICE POLICY

Proper operation of your machine is a top priority with the Gripnail Corporation. We will assist you to the best of our abilities to see it is kept in peak operating condition.

In many cases, service needs can be made simply by calling Gripnail Customer Service Department. If it becomes necessary for a service technician to visit your plant, we can make the arrangements.

All Gripnail machines are covered under a one year New Machine Warranty (see Warranty next page). Replacement parts covered by the warranty are supplied free of charge, provided the original parts are returned to Gripnail and do not shown signs of abuse.

At the end of the new machine warranty period, the buyer has the option of purchasing a Limited Extended Parts Warranty. This warranty covers specified machine parts only. Call Gripnail for full details.

All warranties on Gripnail machines are good only if Gripnail fasteners are used. If it is determined that fasteners other than those manufactured by Gripnail have been used, the warranty is voided. At Gripnail, we believe in servicing what we sell for the lifetime of the equipment. If you are having difficulty with your machine or if you have any questions regarding service and warranty policy, please call, fax, or write:

Gripnail Customer Service Department

WARRANTY

All Gripnail Fastening Equipment is thoroughly inspected and tested before leaving the factory. Gripnail Corporation warranties its equipment to be free from defects in workmanship and materials under normal and proper use for a period of one (1) year from date of sale to original end purchaser.

The warranty does not apply when repairs or attempted repairs have been made by persons other than Gripnail Corporation’s authorized service personnel, or where it is determined by our service personnel that the equipment has been subjected to misuse, negligence or accident. If it is determined that any fasteners other than those manufactured by Gripnail have been used in this machine or tool, the warranty is terminated.

This warranty is not effective unless equipment is properly registered with the factory through the use of warranty information card prior to use. Gripnail Corporation shall not be liable for contingent damages or delays caused by defective materials or any other means beyond our control.
